

DHAVAL PARMAR

Senior Full Stack Developer · Full-Stack Developer · AI-Augmented Engineering
+91 8200163577 · parmardhaval375@gmail.com · linkedin.com/in/dhaval-p-5a1975192 · Surat, Gujarat

PROFESSIONAL SUMMARY

Senior Full Stack Developer with 5+ years of production experience architecting scalable web applications across OTT streaming, e-commerce, and real estate domains. Expert in React.js, TypeScript, and Micro Frontend (MFE) architecture, with hands-on backend delivery using Node.js, GraphQL, and AWS serverless. Proven ownership of frontend architecture decisions, CI/CD pipelines, and end-to-end production deployments. Actively leverages AI-assisted tooling (GitHub Copilot, Claude AI, OpenAI Codex) to accelerate delivery and improve code quality. Strong track record of driving measurable performance improvements, reducing technical debt, and mentoring engineers.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python (FastAPI — learning)

Frontend Frameworks: React.js, Next.js, Micro Frontends (Module Federation)

State Management: Redux Toolkit (RTK Query), Zustand, Jotai, Context API

Styling & UI: Tailwind CSS, SCSS, Styled Components, Responsive Design

Backend & APIs: Node.js (Express), GraphQL (Apollo Client & Server), REST APIs, BFF Architecture, Prisma ORM, WebSockets

Databases: PostgreSQL, DynamoDB, MongoDB, MySQL

Cloud & DevOps: Jenkins, Vercel, Spinnaker, GitHub Actions, Docker (basic), AWS (Lambda, DynamoDB, AppSync, Amplify, CloudWatch)

Testing: Jest, React Testing Library, Playwright (E2E)

Performance: Lazy Loading, Code Splitting, Memoization, Virtualization, Core Web Vitals, Bundle Analysis

Monitoring: Sumo Logic, CloudWatch

AI Tools: GitHub Copilot, Claude AI, OpenAI Codex, Cursor IDE

Other: Git, Webpack, Vite, Figma, GTM / dataLayer, i18next, Feature Flags, Agile / Scrum, WIZ

PROFESSIONAL EXPERIENCE

Senior Frontend Developer | **La Net Team Software Solutions Pvt. Ltd.** — Surat, Gujarat | May 2021 – Present

- Architected production React.js + TypeScript UIs across three distinct verticals - OTT streaming, e-commerce checkout, and real estate - serving thousands of concurrent users with consistent sub-3s load targets.
- Drove a strategic migration from legacy Flummox state management to Redux Toolkit Query (RTK Query), reducing data-fetching boilerplate, improving cache hit ratios, and eliminating redundant API calls across the codebase.
- Independently evaluated RTK Query vs. React Query, documented trade-offs, presented the proposal to the team, and led the full migration without external guidance - reducing technical debt significantly.
- Built and maintained Micro Frontend (MFE) architecture using Module Federation, enabling independent deployments and isolated development across large feature teams.
- Worked BFF (Backend-for-Frontend) layer for e-commerce checkout, optimizing GraphQL queries, reducing over-fetching, and decoupling frontend data needs from the monolithic API contract.
- Delivered measurable Core Web Vitals improvements through lazy loading, route-based code splitting, component memoization, and list virtualization on high-volume pages.

- Owned CI/CD pipelines (Jenkins + Spinnaker) end-to-end - including deployment checklists, release readiness reviews, and go-live decisions - maintaining a zero-untested-code-to-production standard.
- Monitored and triaged production issues using Sumo Logic log analysis; reduced mean time-to-resolution for critical checkout and streaming bugs.
- Accelerated feature delivery by ~30% using GitHub Copilot and Claude AI for boilerplate generation, test scaffolding, edge-case surfacing, and PR review assistance.
- Collaborated cross-functionally with UI/UX designers, QA engineers, backend developers, and DevOps to ensure quality, timely releases at scale.
- Mentored junior engineers through code reviews, architecture walkthroughs, and pair-programming sessions, promoted clean component design and testability standards.

KEY PROJECTS

OTT Reference Applications — Web & WebTV *(React.js, Redux Toolkit Query, SCSS, Jenkins, GitHub Copilot)*

- Architected dynamic, data-driven streaming interfaces that render content layouts from a Presentation Manager (PM) configuration service, supporting rapid content iteration without frontend deploys.
- Engineered complex media consumption flows including Profile Selection, Straight-To-Playback navigation, dynamic content rows, and Force Update modal orchestration.
- Identified and resolved critical JavaScript vulnerabilities and Wiz security findings, achieving full platform security compliance ahead of launch deadlines.
- Optimized cross-device rendering specifically for WebTV's constrained runtime, tailoring component lifecycles and event handling for non-browser TV environments.

Presentation Manager (PM) — OTT Content Platform *(React.js, RTK Query, REST APIs, Styled Components, GitHub Copilot)*

- Spearheaded scalable frontend modules for a centralized OTT content management platform used to configure streaming applications across Web and WebTV clients.
- Led strategic migration from legacy Flummox to RTK Query, improving data-fetching performance, simplifying caching logic, and reducing bundle size.
- Engineered core configuration modules integrating complex REST APIs to serve dynamic UI layouts and runtime configuration data to downstream client applications.

E-commerce Platform — Cart & Checkout *(React, Next, Node, TypeScript, GraphQL, Tailwind CSS, BFF Architecture, Playwright, Jest, Sumo Logic, Claude AI)*

- Built modular, design-system-aligned UI components including Address Book, Wishlist, Cart Items, and Order History, each decoupled and independently testable.
- Worked on BFF layer to optimize GraphQL queries for checkout-critical flows, reducing frontend data-handling complexity and improving perceived page performance.
- Scaffolded and maintained Playwright E2E test suites for critical checkout paths, reducing regression risk on high-revenue flows.
- Debugged and resolved production incidents using Sumo Logic log correlation, improving platform reliability and reducing customer-facing error rates.
- Instrumented analytics events via Google Tag Manager and dataLayer to support conversion tracking and A/B test measurement.

Real Estate Web Platform *(React, Next, TypeScript, Redux, Tailwind CSS, i18next, Micro Frontends, Jest, React Testing Library)*

- Contributed to the design and maintenance of a Micro Frontend (MFE) architecture enabling independent feature-team deployments with clear module boundaries.
- Integrated i18next for multi-language support and Redux for centralized state management across a distributed MFE codebase.
- Achieved high unit and integration test coverage using Jest and React Testing Library; owned production deployments and release readiness sign-offs.

EDUCATION

M.Sc. Information Technology — VNSGU, J.P. Dawar Institute of Information Science & Technology, Surat | 2019 – 2021

B.Sc. Information Technology — VNSGU, J.P. Dawar Institute of Information Science & Technology, Surat | 2016 – 2019

CORE COMPETENCIES

- **Technical Leadership:** Acting Senior dev responsibilities - PR reviews, coding standards, architecture guidance, and mentoring junior developers to independent feature ownership.
- **AI-Augmented Engineering:** Daily use of GitHub Copilot, Claude AI, OpenAI Codex, and Cursor IDE to accelerate delivery, reduce defects, and generate test coverage.
- **Frontend Architecture:** Deep expertise in Micro Frontends (MFE), BFF patterns, state management design, and component library architecture for large-scale apps.
- **Production Discipline:** Full ownership of deployment pipelines, release checklists, and go-live decisions; zero tolerance for shipping untested code.
- **Full-Stack Growth:** Actively expanding backend depth with Node.js/GraphQL, Prisma ORM, PostgreSQL, and AWS serverless architecture toward full-stack delivery.
