

DHAVAL PARMAR

Senior Frontend Developer | Full-Stack Enthusiast | AI-Augmented Engineer

+91 8200163577 • parmardhaval375@gmail.com • linkedin.com/in/dhaval-p-5a1975192 • Surat, Gujarat

PROFESSIONAL SUMMARY

Senior Frontend Developer with 5+ years of experience building scalable, high-performance web applications using React.js, TypeScript, GraphQL, and Micro Frontend (MFE) architecture. Proven track record in OTT streaming platforms, e-commerce checkout systems, and real estate web platforms. Actively expanding into full-stack delivery with production Node.js/GraphQL backend work and AWS serverless infrastructure. Proficient in AI-augmented development workflows daily user of GitHub Copilot, Claude AI, and OpenAI Codex to accelerate feature delivery, improve code quality, and generate test coverage. Passionate about clean architecture, performance optimization, and mentoring engineers.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React.js, Next.js, Node.js (Express), Python (FastAPI)

Styling & UI: Tailwind CSS, CSS3, SCSS, Styled Components, Responsive Design, Micro Frontends (MFE / Module Federation)

State Management: Redux Toolkit (RTK Query), Zustand, Jotai, Context API

Backend & Databases: Node.js REST APIs, GraphQL (Apollo Server), Prisma ORM, PostgreSQL, MongoDB, MySQL, SQLite, JWT Auth

API & Architecture: GraphQL (Apollo Client), REST APIs, BFF Architecture, Axios, WebSockets

Testing: Jest, React Testing Library, Playwright (E2E), Sumo Logic (log analysis)

Performance: Lazy Loading, Code Splitting, Memoization, Virtualization, Debouncing/Throttling, Bundle Analysis

Cloud & DevOps: AWS (Lambda, DynamoDB, AppSync, Amplify, CloudWatch), GitHub Actions (CI/CD), Docker (basic)

AI & Productivity Tools: GitHub Copilot, Claude AI (Anthropic), OpenAI Codex, Cursor IDE - used daily for code generation, debugging, PR reviews, and test scaffolding

Analytics & Tracking: Google Tag Manager (GTM), dataLayer instrumentation, event tracking

Localization & A11y: i18next, WCAG accessibility fundamentals

Tools & Workflow: Git, GitHub, Webpack, Vite, Figma, VS Code, Agile (Scrum / Kanban), Jira

PROFESSIONAL EXPERIENCE

La Net Team Software Solutions Pvt. Ltd. — Surat, Gujarat

May 2021 – Present

Senior Frontend Developer

- Architected and delivered production-grade React.js + TypeScript UIs across OTT streaming, e-commerce, and real estate domains, serving thousands of concurrent users.
- Leveraged **GitHub Copilot** and **Claude AI** daily to accelerate feature development by ~30%, auto-generate boilerplate, scaffold unit tests, and surface edge-case bugs during code reviews.
- Used **OpenAI Codex** and **Cursor IDE** for rapid prototyping of new components, reducing implementation time for repetitive UI patterns significantly.
- Translated complex business requirements into scalable, reusable component architectures with a strong focus on performance and maintainability.

- Integrated RESTful and **GraphQL APIs** following best practices for error handling, data caching, pagination, and over-fetch prevention using Apollo Client and RTK Query.
- Optimized frontend performance through lazy loading, code splitting, selective rendering, and virtualization — measurably reducing load times and improving **Core Web Vitals**.
- Independently evaluated and proposed **RTK Query** over React Query, led the migration, reducing technical debt and improving data-fetching performance across the codebase.
- Owned **CI/CD** pipelines, deployment checklists, release readiness reviews, and go-live decisions with zero tolerance for untested code reaching production.
- Worked closely with cross-functional teams including UI/UX designers, QA engineers, backend developers, and DevOps for timely, quality releases.
- Familiar with **AWS** serverless services (Lambda, DynamoDB, AppSync, Amplify, CloudWatch) for integrating backend capabilities into frontend architectures.

KEY PROJECTS

OTT Reference Applications (Web & WebTV)

Tech Stack: *React.js, Redux Toolkit Query, SCSS, WebTV SDKs, GitHub Copilot*

- Architected dynamic, data-driven streaming interfaces for Web and WebTV platforms, rendering content from Presentation Manager (PM) configurations.
- Built complex media consumption features: dynamic content rows, Profile Selection, Straight-To-Playback navigation, and Force Update modal flows.
- Accelerated component development using **GitHub Copilot** for boilerplate generation and **Claude AI** for debugging complex state synchronization issues.
- Identified and resolved critical JavaScript vulnerabilities and Wiz security issues, ensuring strict platform compliance.
- Optimized cross-device rendering performance, tailoring components specifically for specialized WebTV interface constraints.

Presentation Manager (PM) — OTT Content Platform

Tech Stack: *React.js, Redux Toolkit (RTK) Query, Flummox, REST APIs, Styled Components, GitHub Copilot*

- Spearheaded development of scalable frontend modules for a dynamic OTT content management platform used to configure streaming applications.
- Led strategic migration from legacy Flummox state management to Redux Toolkit Query (**RTK Query**), significantly improving data fetching and caching performance.
- Used **GitHub Copilot AI** for architectural review of migration strategy, validating component patterns, and generating migration test cases.
- Engineered core modules integrating complex REST APIs to serve dynamic UI layouts and configuration data to downstream client applications.

E-commerce Platform — Cart & Checkout

Tech Stack: *React, TypeScript, GraphQL, Tailwind CSS, BFF Architecture, Playwright, Jest, Sumo Logic, Analytics, Claude*

- Built modular UI components including Address Book, Wishlist, Cart Items, and Order History aligned with design system standards.
- Integrated **BFF** (Backend for Frontend) layer to optimize GraphQL queries and reduce frontend data handling complexity.
- Used **Claude** to scaffold **Playwright** E2E test cases for critical checkout flows, then refined and maintained them manually.
- Monitored and debugged production issues using Sumo Logic log analysis, improving overall platform reliability.

Real Estate Web Platform

Tech Stack: *React, TypeScript, Redux, Tailwind CSS, i18next, Micro Frontends (MFE), Jest, React Testing Library*

- Helped structure and maintain a **Micro Frontend (MFE)** architecture for isolated module development and independent deployments.

- Integrated Redux and i18next for centralized state and multilingual (multi-language) support across the platform.
- Wrote comprehensive unit and integration tests using Jest and React Testing Library; owned production deployments and release readiness.

EDUCATION

M.Sc. Information Technology

2019 – 2021

VNSGU — J.P. Dawar Institute of Information Science & Technology, Surat

B.Sc. Information Technology

2016 – 2019

VNSGU — J.P. Dawar Institute of Information Science & Technology, Surat

CORE COMPETENCIES

- **Technical Leadership & Mentoring:** Acting Tech Lead within 1 year PR reviews, coding standards, and junior mentorship to independent feature ownership.
- **AI-Augmented Engineering:** Daily use of GitHub Copilot, Claude AI, OpenAI Codex, and Cursor IDE to accelerate delivery, reduce bugs, and generate test coverage.
- **Architectural Decision-Making:** Independently drove RTK Query migration evaluated options, proposed solution, executed without external direction.
- **Production Discipline:** Full ownership of deployment pipelines, release checklists, and go-live decisions; zero tolerance for shipping untested code.
- **Full-Stack Growth Mindset:** Expanding into Node.js/GraphQL backend, FastAPI (Python), and AWS serverless architecture to become a complete full-stack engineer.
